DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16 and 23-31, drawn to a Magnetic Resonance Imaging system having a cooled RF coil assembly, classified in class 324, subclass 318.
 - II. Claims 17-22, drawn to a method of manufacturing a cooled RF coil assembly, classified in class 29, subclass 600.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case The RF coil assembly can be produced by a conventional method that does not call for the inventive steps of using two mandrels and the introduction of an uncured composite material under vacuum pressure.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
